## Scotts Steering Stabilizer Tools and Accessories

### Bullet Tool

If you want to service your own stabilizer, you will need this tool! Made from aluminum, this tool is necessary for installing the main shaft through the stabilizer seals without damaging them. The tool allows the seal to gently expand as it passes over the edge of the main shaft making installation a breeze. From **R120.00**

### Large Knob

We designed the "Large Knob" to be used primarily on bikes with Oversize handlebars or with bars that do not have a crossbar. However, it is possible to use this knob on "crossbar-type" bars as long as there is enough clearance for it to physically fit, which is determined by where the crossbar is, relative to the stock knob. Many bikes with crossbars require the smaller knob as the large knob will not clear the crossbar. The larger knob makes a little easier to make quick changes on the fly.

The Large Knob price includes all the parts required to make it functional into your existing stabilizer, including a new stainless steel spring and ball for your base valve, and Allen wrenches. From **R175.00**

### Link Arm Puller

The link arm can be mounted in two different positions depending on your application. A lot of Enduro riders using the computer prefer the stabilizer to be mounted opposite of the standard position in order to accommodate an area for the computer. The Link Arm Puller allows you to remove and replace the link arm without damage to the seal area on the bottom of the stabilizer. The Puller is also essential for those of you who plan to service your stabilizer yourselves. From **R165.00**

### ODO Bracket

Stainless Steel for XR's – no details available (as yet). From **R435.00**

### Scotts Stabilizer Fluid

Now you can use the exact fluid that we install in the Dampers from the factory. This bottle of fluid (approx. 8 oz.) is what you need when servicing your Damper. The handy squeeze bottle makes bleeding the Damper a simple chore as the tapered tip plugs directly into the bleed holes. Treat your Damper to fresh oil, it will pay you back! From **R85.00**

### Stabilizer Security Bolt Kit

Now you can rest easier about the security of your damper when you leave it mounted. These bolts secure your stabilizer to your bike, without making it any harder for you to remove (when you use the enclosed tool.) This is a tremendous value for the security of your investment. **R85.00**
